DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wu et al. (US 6,384,997 B1), in view of Aoki (US 2001/0010605).

As to Claim 1, Wu et al. discloses a method for writing data on a number of sectors of a track of a disk drive (FIG.1, "10", "12") that comprises: sending a signal to write data on a first sector of the track (col. 3, lines 58-60, sending a signal to write data is inherent in Wu's write operation, note col. 3, lines 65-67, that writing occurs on a sector of a disk); receiving a write data fault (col. 3, lines 60-62); sending a signal to write data on another sector of the track after skipping a predetermined number of sectors (col.3, line 64 - col. 4, line 10); waiting for the first sector to be in position again (col.4, lines 7-14 and 42-47);

Wu et al. fails to particularly disclose sending a signal to retry to write data on the first sector if a predetermined number of retries to write data on the track has not been exceeded.

Art Unit: 2651

However, Aoki discloses such (page 3, [0036-0039, 0043]). Therefore it would have been obvious to one of ordinary skill in the art to modify Wu et al's method by implementing a retry operation as disclosed by Aoki, the motivation being because it would provide Wu et al.'s method with the enhanced capability of enabling a secured constant data transfer rate from a disk to the host system (page 2, [0013]).

As to Claim 2, has limitations similar to those treated in the rejection of claim 1, are therefore met by the references as discussed above. Claim 1, recites however "red data fault" instead of a 'write data fault', Aoki is relied upon for disclosing such (page 2, [0029,0032,0036,0039]).

As to Claim 3, Aoki further discloses wherein the predetermined number of sectors to skip is zero (0) ([0042,0044]).

As to claim 4, Wu et al. further discloses the predetermined number of sectors to skip is 1, 2 or more (col.3, line 67-col.4, line 7).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Russell (US 6,247,152 B1); Hoskins et al. (US 2002/0057510 A1).
